Released: September 4, 2012, 12:00 p.m. PDT

WALNUT PRODUCTION FORECAST UP

The 2012 California walnut production is forecast at 470,000 tons, up 2 percent from 2011's production of 461,000 tons. This forecast is based on the 2012 Walnut Objective Measurement (O.M.) Survey, which was officially conducted August 1 through August 23, 2012. There were a few samples completed before August 1 for training and scheduling purposes.

Weather during pollination was reasonable with only a few areas reporting frost. Spring weather conditions were ideal allowing for the nuts to size without delay. There were some reports of abnormal nut drop in June and July due to blight.

The 2012 Walnut O.M. Survey utilized a total of 738 blocks with two sample trees per block. Survey data indicated an average nut set of 1,375 per tree, down 1 percent from 2011's average of 1,388. Percent of sound kernels in-shell was 98.0 percent Statewide. In-shell weight per nut was 22.1 grams, while the average in-shell suture measurement was 32.1 millimeters. The in-shell cross-width measurement was 32.6 and the average length in-shell was 38.5 millimeters.

Estimated nut sets, sizing measurements, average number of trees per acre, and estimated bearing acreage were used in the statistical models.

SURVEY HISTORY

The Walnut O.M. Survey began in 1958 to fulfill industry needs for an accurate walnut production forecast prior to harvest. The original sample was chosen proportionally to county and variety of bearing acreage. With each succeeding year, additions and deletions have been made in the sample to adjust for acreage removed, new bearing acreage, and operations that choose not to participate in the survey.

SAMPLING PROCEDURES

Once a block is randomly selected and permission is granted by the operation for enumerators to enter the block, two trees are randomly selected. An accessible branch is chosen, which is 5-15 percent of the total cross-sectional area of the primary limbs and reachable with a twelve-foot ladder. Measurements are made on the trunk, each primary, and each split leading to and including the accessible branch. The sample tree and accessible branch are marked by a single tag.

On the accessible branch, every first of five nuts is picked for use in size and grade determinations. If available, at least ten nuts are harvested from the accessible branch for this purpose.

The following measurements are made on nuts selected for sizing:

- 1. Weight of nut including hull
- 2. Width of shell at suture
- 3. Width of shell 90 degrees to suture line (cross-suture)
- 4. Length of shell
- 5. Kernel grade
- 6. Weight of nut in-shell

DATA RELIABILITY

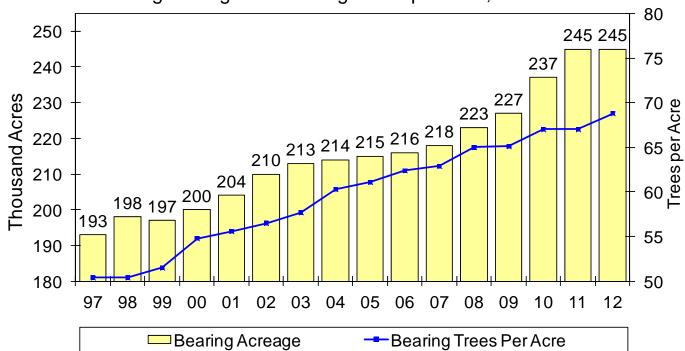

The 80 percent confidence interval is from 432,000 tons to 508,000 tons.

^{1/} Price Per Ton and Total Value are July 2012 preliminary data.

CALIFORNIA WALNUTS Bearing Acreage vs. Bearing Trees per Acre, 1997-2012

^{2/} Bearing years include plantings of the following: Chandler, Chico, Howard, Tulare (2008 & Earlier); 50-55, 59-124, 4946, Amigo, Ashley, Bardoni, Cisco, Earhorn, Grove, Gustine, Honeycutt, Houston, Jensen, Lompoc, Marchetti, Nuggett, Payne, Pedro, Serr, Sunland, Tehama, Trinta, UCD 67-13, Vina, Westside (2007 and Earlier); Franquette, Franquette Scharsch, Mayette, Placentia, Poe, Willsons/Willsons Wonder, Woodland (2005 & Earlier); all other varieties not specified (2006 & Earlier).

^{3/} Price Per Ton and Total Value preliminary data will be released July 2013.
