

# 2015 California Walnut Objective Measurement Report

Cooperating with the California Department of Food and Agriculture

Pacific Regional Field Office · P.O. Box 1258 · Sacramento, CA 95812 · (916) 498-5161 · (855) 270-2722 Fax · [www.nass.usda.gov/ca](http://www.nass.usda.gov/ca)

Released: September 3, 2015, 12:00 p.m. PDT

## RECORD WALNUT PRODUCTION FORECAST

The 2015 California walnut production forecast is at a record 575,000 tons, up 1 percent from 2014's production of 570,000 tons. This forecast is based on the 2015 Walnut Objective Measurement (O.M.) Survey, officially conducted by the National Agricultural Statistics Service from August 1 through August 29, 2015. There were a few samples completed before August 1 for training and scheduling purposes.

Despite a lack of chilling hours and a drought that continued to impact California, the 2015 walnut crop forecast is at a record level. Relatively mild summer temperatures have benefitted the crop. Growers used surface water where available and groundwater when necessary to provide adequate water supply to the trees. Crop quality is reported to be excellent with low disease and insect pressures.

The 2015 Walnut O.M. Survey utilized a total of 745 blocks with two sample trees per block. Survey data indicated an average nut set of 1,272 per tree, down 7 percent from 2014's average of 1,372. Percent of sound kernels in-shell was 98.5 percent Statewide. In-shell weight per nut was 22.7 grams and the average in-shell width suture measurement was 32.8 millimeters. The in-shell cross-width measurement was 32.8 and the average length in-shell was 38.5 millimeters. All of the sizing measurements were above previous year.

Estimated nut sets, sizing measurements, average number of trees per acre, and estimated bearing acreage were used in the statistical models.

## SURVEY HISTORY

The Walnut O.M. Survey began in 1958 to fulfill industry needs for an accurate walnut production forecast prior to harvest. The original sample was chosen proportionally to county and variety of bearing acreage. With each succeeding year, additions and deletions have been made in the sample to adjust for acreage removed, new bearing acreage, and operations that choose not to participate in the survey.

## SAMPLING PROCEDURES

Once a block is randomly selected and permission is granted by the operation for enumerators to enter the block, two trees are randomly selected. An accessible branch is chosen, which is 5-15 percent of the total cross-sectional area of the primary limbs and reachable with a twelve-foot ladder. Measurements are made on the trunk, each primary, and each split leading to and including the accessible branch. The sample tree and accessible branch are marked by a single tag.

On the accessible branch, every first of five nuts is picked for use in size and grade determinations. If available, at least ten nuts are harvested from the accessible branch for this purpose.

The following measurements are made on nuts selected for sizing:

1. Weight of nut including hull
2. Width of shell at suture
3. Width of shell 90 degrees to suture line (cross-suture)
4. Length of shell
5. Kernel grade
6. Weight of nut in-shell

## DATA RELIABILITY

The 80 percent confidence interval is from 529,000 tons to 621,000 tons.

### CALIFORNIA WALNUTS

Sept. Objective Forecast vs. Final Production

**California English Walnut Acreage, Production, Price And Value In-Shell**

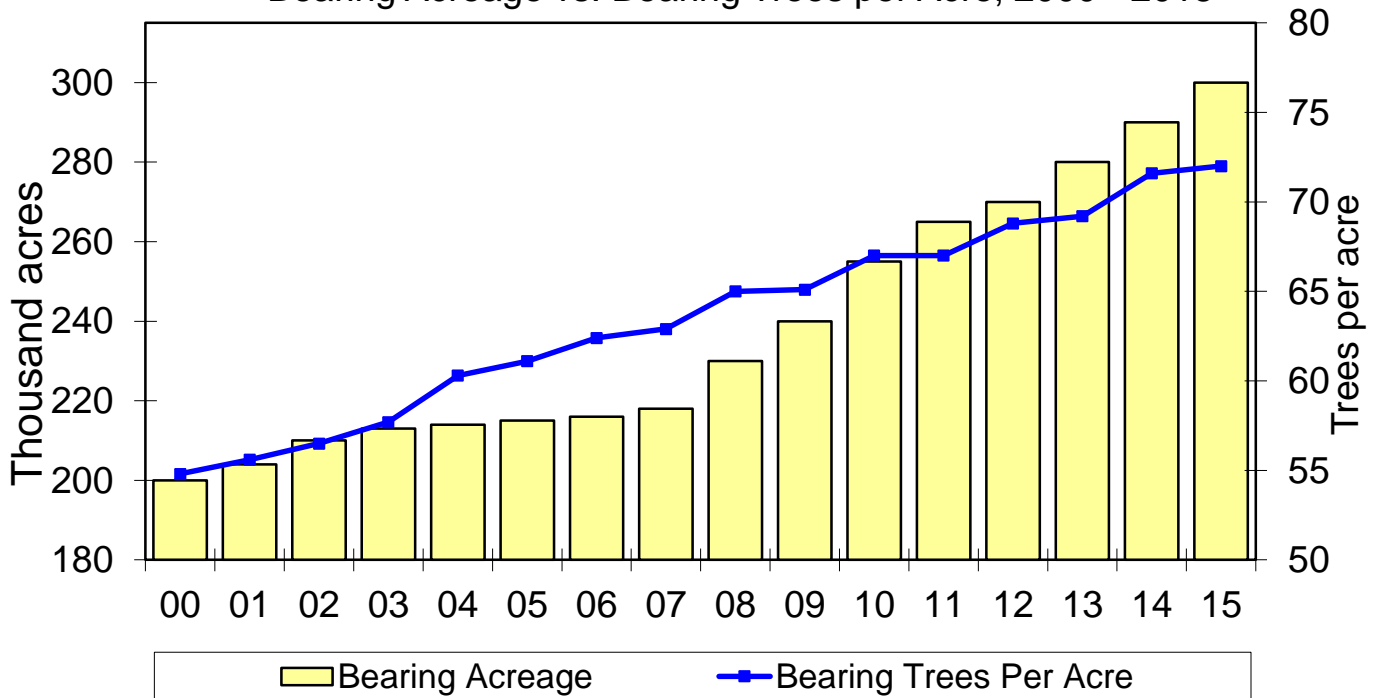

Year	Bearing acres	Trees per acre	Per bearing acre	Total production	Price per ton	Total value
			Tons		Dollars	1,000 Dollars
1990	181,000	45.7	1.25	227,000	1,040	236,080
1991	181,000	46.8	1.43	259,000	1,060	274,540
1992	178,000	47.5	1.14	203,000	1,410	286,230

2011	265,000	67.0	1.74	461,000	2,900	1,336,900
2012	270,000	68.6	1.84	497,000	3,030	1,505,910
2013	280,000	69.2	1.76	492,000	3,710	1,825,320
2014 a/	290,000	71.6	1.97	570,000	3,230	1,841,100
2015 b/ c/	300,000	72.0	1.92	575,000	(NA)	(NA)

a/ Price per ton and Total value are July 2015 preliminary data.

b/ Bearing years include plantings of the following: Chandler, Chico, Howard, Tulare (2011 & Earlier); 50-55, 59-124, 4946, Amigo, Ashley, Bardoni, Cisco, Earhorn, Grove, Gustine, Honeycutt, Houston, Jensen, Lompoc, Marchetti, Nuggett, Payne, Pedro, Serr, Sunland, Tehama, Trinta, UCD 67-13, Vina, Westside (2010 and Earlier); Franquette, Franquette Scharsch, Mayette, Placentia, Poe, Willsons/Willsons Wonder, Woodland (2008 & Earlier); all other varieties not specified (2009 & Earlier).

c/ Price per ton and Total value preliminary data will be released July 2016.

**CALIFORNIA WALNUTS**  
**Bearing Acreage vs. Bearing Trees per Acre, 2000 - 2015**

Shells Measured							14,427						14,631						14,803						14,813						

1/ Sizes used are as follows: Mammoth -- Larger than 96/64" in diameter; Jumbo -- 80/64" to 96/64"; Large -- 76/64" to 80/64" for Eureka variety, 77/64" to 80/64" for all other varieties; Medium -- 73/64" to 76/64" for Eureka, 73/64" to 77/64" for all others; Baby -- 60/64" to 73/64"; and Others -- below 60/64".

2/ Percentage distributions based upon nut samples taken in the field, may not equal 100 percent due to rounding.

***The California Walnut Industry has been very supportive.  
We appreciate your continued cooperation!***

VIC TOLOMEO, Regional Director  
TRAVIS AVERILL – CURT STOCK, Deputy Regional Directors

JENNIFER VAN COURT – ARTHUR ROSALES – ROSA LEMUS, Statisticians
