

2026 STANDING ACREAGE AS OF APRIL 30, 2026

In cooperation with the California Walnut Board
For Release: June 1, 2026

RESULTS

The California Walnut Board (CWB) has commissioned Land IQ to develop an in-season, statewide walnut acreage assessment. As a part of this, acreage as of April 30, 2026 is provided in June, and the final acreage, as of August 31, 2026 is provided in November.

This report includes preliminary bearing acreage for the 2026 production year (September 1, 2025 - August 31, 2026), as well as a partial account of removed orchards. Removed orchards have been determined through spatial analysis as of April 30, 2026. Orchards that were identified as stressed or abandoned in the 2025 acreage assessment are included in the bearing, standing acreage but not included in the producing, standing acreage.

As a result, acreage statistics as of April 30, 2026 are:

2025 Standing Bearing Acreage:	380,205
New Bearing Acres Coming into Production:	+7,097
Removed Acres (9/1/25-4/30/26):	(4,665)
Removed Acres (5/1/26-8/31/26):	TBD
Inter-Year Adjustments:	(102)
2026 Standing Bearing Acreage:	382,535
2025 High Stress/Abandoned Acreage Standing:	(8,856)
2026 Producing Standing Acreage:	373,679

Both bearing acreage and removals will be updated for the final 2026 total acreage estimate to be delivered in November 2026. It should be noted that bearing acreage may be adjusted slightly (+/- 1-3%) following summer 2026 removals and ground truthing verification. Any change will mostly likely affect acreage in the 3rd year non-bearing, thus the impact on estimates of overall production volume should be considered negligible.

The tables on the following pages represent a full account of acreage between 2025 and 2026, as well as removals and bearing acreage by county as of April 30, 2026. Bearing acreage and removals by year planted are provided as well.

INTRODUCTION

Land IQ has provided mapping for the CWB in 2014, 2019, and 2023 - 2025. The walnut industry now has four years of consecutive mapping.

APPROACH

Land IQ draws upon multiple lines of evidence including agronomic and remote sensing knowledge, unique field boundaries, robust on-the-ground verification, customized image analysis, and machine learning algorithms to classify walnut orchards.

For each mapped year, Land IQ performs the following steps:

1. Imagery Acquisition
2. Irrigated Field Boundary Delineation
3. Ground Truthing
4. Remote Sensing Analysis
5. Change Detection and Update

For this first deliverable, determining removals and bearing acreage, Land IQ utilizes the spatial mapping from 2025, in addition to a change detection analysis to determine removals.

FINAL ESTIMATE

The final acreage will be provided in November and will include:

- Bearing Acreage
- Non-Bearing Estimate
- Total Removed Acreage (September 1, 2025 - August 31, 2026)
- Stressed Acreage (may not be producing at full potential)
- Abandoned Acreage (considered non-producing)

2026 STANDING ACREAGE AS OF APRIL 30, 2026

2026 Initial Estimate (as of April 30)	Initial Estimate	Description
2025 Standing Bearing Acreage	380,205	Land IQ 2025 Final Standing Bearing Acreage. This includes stressed and abandoned orchards.
New Bearing Acres Coming into Production	7,097	Previous non-bearing acreage (planted 2022) newly coming into production. Some may not be harvested due to economics.
Initial Removed Acreage	(4,665)	Removals mapped between September 1, 2025 and April 30, 2026.
Inter-Year Adjustments	(102)	Mis-classifications, reshaping, corrections.
2026 Initial Standing Bearing Acreage	382,535	Land IQ 2026 Initial Standing Bearing Acreage. This includes stressed and abandoned orchards. Initial Removed acreage through April 30 has been deducted. Additional removals will occur between May 1, 2026 and August 31, 2026 and this acreage will decrease.
2025 High Stress/Abandoned Acreage Still Standing	(8,856)	Acreage showing high levels of stress over current or multiple water years. These are less likely to be in production and are removed from "Producing Bearing Acreage Estimate."
2026 Initial Producing Bearing Acreage	373,679	Initial Standing Acres minus 2025 High Stress/Abandoned Acreage that is still standing.
2026 Final Estimate (as of August 31)	Final Estimate	Description
2026 Removals (Initial: September 1, 2025 through April 30, 2026, Final: September 2025 through August 2026)	TBD	Removals mapped between September 1, 2025 and August 31, 2026. (Initial estimate from September 2025 through April 2026 was 4,665 acres)
New Bearing Acreage Coming into Production	TBD	Previous non-bearing acreage (planted 2022) newly coming into production. Some may not be harvested due to economics.
2026 Total Standing Acreage	TBD	Total standing acreage; includes current 2026 mapping after removals and newly estimated non-bearing acreage.
2026 Non-Bearing Estimate	TBD	Includes mapped non-bearing orchards from 1 to 4 years old, plus an estimate of very young orchards that have not been detected due to immature status. This estimate is developed using mapping, ground truth data, and statistical analysis.
2026 Bearing Age Acreage	TBD	Total acreage standing with a bearing age, inclusive of stressed and abandoned acreage outlined below.
High Stress, Likely Abandoned Acreage	TBD	High levels of stress over current or multiple water years. Less likely to be in production and were removed from "Producing Bearing Acreage Estimate."
2026 Final Producing Bearing Acreage Estimate	TBD	Estimate of bearing acreage likely in production, omitting higher confidence abandoned and stressed acreage.

2026 STANDING ACREAGE AS OF APRIL 30, 2026
